

DANIOLABS

Industry-experienced Pharmacologist/Biologist

A dynamic, industry-experienced pharmacologist or biologist with previous first-hand understanding of developing innovative disease models or using model organisms in the identification of novel therapeutics, is sought to take a practical lead in the Company's discovery programmes. The individual will integrate *in vivo* pharmacology (both external and internal) with the Company's cornerstone technology; the use of zebrafish in drug discovery and development. With a track record of making things happen – ideally in a fast moving company – with both scientific rigour and core management skills, this role would suit somebody who wants their work to make a difference and to set-up and lead a winning team.

DanioLabs is a young company, based in Cambridge (UK), that provides phenotypic based *in vivo* pharmacology screening services on an international basis to the pharmaceutical industry, as well as identifying new therapeutics on its own account for internal development. Internal therapeutic interests are in the areas of neurology, ophthalmology. Experience using zebrafish as a model organism, or in our therapeutic interest areas, would be an advantage, but is not a requirement. Attitude, commitment and personal qualities are the key determinants. Salary dependent upon experience and the individual expectations, but will reflect the importance of this role.

Company details are found at www.daniolabs.com

Applicants should send their CV and details of 2 referees to recruitment@daniolabs.com. Closing date 7th May 2005
