

Gun Safety Shrouds 10,000 to 40,000 PSI

Applications/ Features:

Operator safety is the first consideration when waterblasting. The Safety Shroud is designed specifically for use with hand-held control guns. These safety shrouds protect the operator from dangerous hose failures occurring near the gun. ALWAYS connect a whip hose and safety shroud to the gun first, then connect the appropriate hose to the other end of the shroud/whip hose with a quick coupling.

The Safety Shroud features a nitrile outer cover which is water, oil and soil resistant. The inner material consists of high strength braided stainless steel. The 20,000 PSI shrouds also include a layer of woven Kevlar™ for superior strength.
