

Flow Divider Valve - 15,000 PSI

Flow Divider Valve
Pressures up to 15,000 PSI
(Up to 90 gpm)

Application/Features:

The FDV (Flow Divider Valve) allows two dump-style control guns to be operated independently from a single pump source without effecting the pressure of the other gun. The total pump flow is divided between the control guns and system pressure will be maintained when either gun or both guns are dumping.

Simple to set up. As easy as: **(1) set pressure, (2) lock it in, (3) ready to use.** Simple to overhaul using Quick Change Valve and Seat Assemblies. Can be mounted on the pump unit or set up remotely on the ground. Adjustment is made by hand (no special tools required).

Flow Divider Valves:

Standard Model	15,000 PSI
Hi-Flow 75 GPM	10,000 PSI
