

# Automatic Throttle Control

## Automatic Throttle Control

3 Models available - 15K, 20K and 40K.

40K Inlet Adapter

20K Inlet Adapter

### Application/Features:

The Automatic Throttle Control (ATC) was developed to eliminate deficiencies encountered in other similar devices on the market.

The convenient, easy-to-use adjuster handle and lock nut make setting the pump operating speed/pressure simple and accurate. The hardened steel thread insert at the top of the cylinder ensures long life and easy maintenance.

It is recommended that this device be used in conjunction with an operator controlled dump valve to release the high pressure water. The Automatic Throttle Control is constructed of durable stainless steel.
