

Anti-perch Rollerbar

**What turns around
comes around!**

Almost 20 years after it was first used on nipple drinkers, the freedom food friendly anti-perch rollerbar is having a renaissance.

When Dalton Engineering purchased Malson Multiflo some four years ago, one of the products they inherited was the aluminium rollerbar, which had enjoyed modest sales. It was first being used on breeder birds in Sweden and England. Now with the focus firmly on bird welfare and the electric shocker becoming a thing of the past, the rollerbar method of providing anti-perch is proving the way forward.

We can retro fit our rollerbar to your existing nipple line. Brackets are available to fit most nipple drinker systems and a complementary system for pan lines and chain feeders is also available from Dalton stock.
