

Bipolar clamp with integral scissor

Coagulation, cutting and grasping in one instrument with the new Bipolar Clamp-Scissors.

The novel design of this bipolar instrument enables the surgeon to grasp tissue, coagulate it or, if available on the generator, thermally seal it. Subsequently, the tissue can be mechanically severed by the scissor without an additional instrument change.

The unique bipolar clamp-scissors are available in 14 cm and 19 cm versions, both curved and straight.

N.B. The clamp is a bipolar device but the scissor is a mechanical device only - not bipolar.

Curved

Straight

Description

Bipolar clamp-scissor 14 cm straight
Bipolar clamp-scissor 14 cm curved
Bipolar clamp-scissor 19 cm straight
Bipolar clamp-scissor 19 cm curved
