

MICKLEWRIGHTS

STRUCTURES LTD.

Project: Bohle UK

105 tonnes of Steelwork

A full design and build project carried out on behalf of a local main contractor in conjunction with local Architects, Consulting Engineers and cladding Sub-Contractors.

Due to poor access the 1st half of the structure was erected, lined and levelled and handed over to allow the installation of the 1st floor pre-cast units before the 2nd half was completed.

The main entrance was required to reflect a 'picture frame' and the office roof is a 'warped construction'. The unusual cassette cladding was required to exactly replicate the head office in Switzerland.
