

# MICKLEWRIGHTS STRUCTURES LTD.

## The Design Office

Our design team is comprised of structural engineers and graduates who between them have a wealth of experience designing a wide and varied range of projects in all market sectors both in the UK and abroad. The collective experience of our team allows us to offer a complete service to our clients, from individual connections on consultant led projects to full building design for 'design and build' projects.

The high level of experience our engineers have is invaluable when designing highly complex modern structures, especially with the current emphasis on value engineering.

Our team have access to the very latest specialist 2-D and 3-D design and analysis software to help them develop and refine their building and connection designs to a very high level. Models produced from these programs can be directly imported into our drawing office CAD software to help progress the projects rapidly to completion.

The Drawing Office

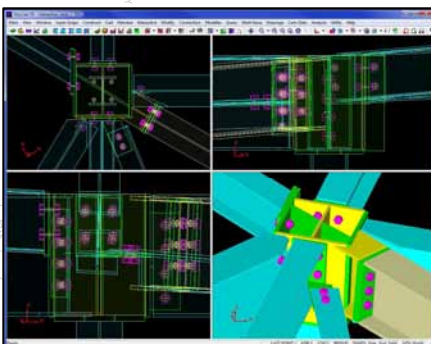

Our in-house drawing office is equipped with eight state of the art 3-D CAD workstations. These specialist systems allows us to build 'virtual' models of the finished structure on screen both quickly and accurately. From these software models we are able to automatically generate material ordering lists, CAM production files, fabrication drawings and on-site erection marking plans.

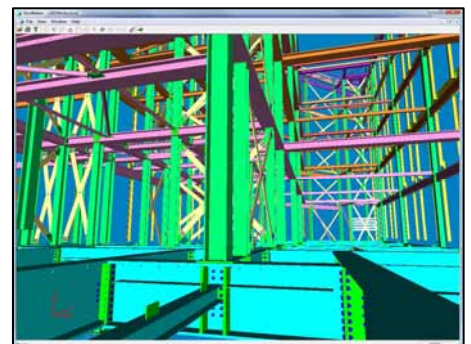

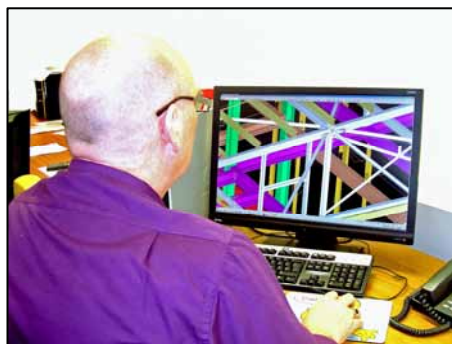

The output from our CAD machines is fed directly into our specialist ordering and manufacturing software, this software enables a quick and efficient ordering process by reducing the human interventions.

All our drawing office staff are highly experienced within the industry and have the flexibility to work individually or as part of a team to suit each contract as required. In addition we have a trainee programme as we believe investing in our employees is key to our continued success.

From our CAD workstations we are also able to supply software models for our clients to view throughout all stages of the contract from tender to practical completion.
