

# TEKNIMEK ENGINEERING

- **Manufacturers of Packaging Equipment**
- **Special Purpose Machinery**
- **CAD Design Layout**

*Changeparts for all bottle handling equipment are designed and manufactured in house by the latest in CNC machinery and CAD computer software . From standard systems for limited changeovers, to Quick Release Systems for regular changeovers or various size products.*

*We are able to provide the solution to our customer requirements whether it be for a 'Single Head Capping Machine' or a 'Multi-Station Monoblock'.*

*Capping Chucks for all types of closures are made to suit all types of machines. From standard 'Dico' mechanical pick & place and 'Gravfill' friction type, to one piece splined chucks.*

*We make Filling nozzles for 'Gravity' 'Vacuum' and 'Volumetric' fillers either to suit a new product or to replace existing ones.*

*We have developed a range of 'Magnetic Torque Units' (clutches) which can be added to any capping machine via an adapter.*

*They are quick and simple to adjust with the different models allowing for different applications.*

*They are an ideal replacement item for the older friction clutches, or make the renovation of an older machine cost effective, giving a consistent torque level day in, day out.*
