

Scary Spiders and Bats

Scrapstore resources you will need:

Foam sticky back circles, piping, white felt circles, black plastic (to make bat wings), sticky back shape (for the bats body), string (to hang the spiders and bats from the ceiling, windows and door frames), glue.

Other resources you may need:
Scissors.

To make your spiders:

Peel the back from the black foam circles, place 8 equal length of piping around the edge of the circle, stick another black foam pad over the one with the piping around the edges, so the two sticky sides face each other, you now have your spider. Add eyes for a scary effect (use the white felt circles for eyes). (Tip - cut the foam pads to the size you want before you peel off the back!)

Add string to the spider so you can hang it from doors, windows or ceilings.

To make your bat:

Cut bat shaped wings from the black plastic (use the template below to help you get the right shape). Peel the back off the sticky backed foam pad (shaped like a bats body) stick the plastic wings onto the sticky side. Attach some string to the bats body so that you can bounce the bat up and down as if it is flying.
